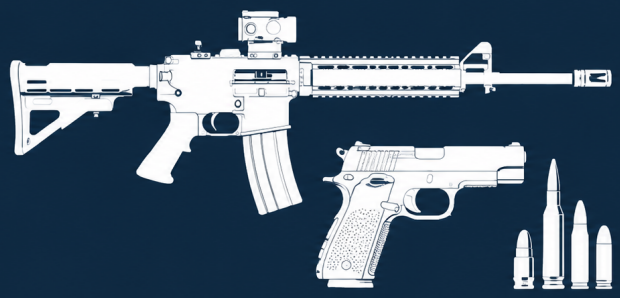
F.A.C.T.

FIREARMS AND AMMUNITION COMPLIANCE AND TRACKING

Formerly GSP



DIGITAL FIREARMS AND EXPLOSIVES MANAGEMENT

Control every asset. Account for every movement.

One connected record for firearms, ammunition, explosives and the people responsible for them.

IN OPERATION AT DSEI LONDON SINCE 2021

Formerly GSP, FACT supports the security, defence and firearms industries. We work closely with Metropolitan Police firearms units and with major UK manufacturers to shape practical, accountable workflows.

Built for armourers, administrators and managers - whether technically experienced or new to digital systems.

01 / ACCOUNTABLE STOCK

A digital register you can trust

Know what you hold, who owns it, where it is and how it got there.

01

Digital gun register

Search firearms and controlled components by serial number, make, model, calibre, status and location. Keep acquisition and disposal records connected to the asset.

02

Immutable audit history

Original audit entries cannot be edited or deleted through normal user functions. Corrections create a further traceable record, preserving the sequence of actions and accountability.

03

Ownership and custody

Distinguish your own stock, customer goods in storage and sold items held for collection. Record third-party stockholders, custody transfers and the responsible organisation.

04

Digital identification

Use barcode and QR labels to connect physical assets with digital records. Support stock checks, item lookup and movement recording, with RFID options where configured.

From receipt to final handover

Receive and identify an item, assign its owner and location, record issues and returns, then retain its disposal or transfer history. Keep supporting documents alongside the record for review and inspection.

Useful to the whole team

Armourers can identify and move stock quickly. Administrators can maintain supporting records. Managers can review holdings, exceptions and audit history without piecing together separate spreadsheets.

The immutable audit trail retains historical entries; authorised amendments are additional events. All brochure photographs are AI-generated illustrations and do not depict named customers or sites.

02 / QUANTITIES AND STORAGE

Visibility beyond item counts

Connect ammunition holdings and explosive content to stores, licences and site controls.

Illustrative target-shooting scene - AI-generated; not a photograph of NRA Bisley.

Ammunition register

Record calibre, type, batch or lot, receipts, issues, returns and remaining balances. Reconcile ammunition used on the range with the quantities returned to store.

NEQ and NEC control

Track net explosive quantity or content, rather than relying on gross weight or cartridge count alone. Aggregate holdings by store or licence area and review configured capacity thresholds.

Separation and storage controls

Bring storage locations, explosive classifications and authorised limits into one operational view. Configured rules can support segregation checks, proximity and separation reviews, and warnings as holdings approach limits.

For multi-store sites, assessment must reflect the applicable licence, hazard type, aggregation rules and site layout.

Supports workflows under the Explosives Regulations 2014 where applicable. Separation and capacity decisions depend on approved site rules and competent assessment; software does not replace either.

Regulatory references: HSE ER2014 guidance | UK firearms guidance | Irish Firearms Acts

03 / CONNECTED OPERATIONS

From the range to the workshop

Extend the same chain of accountability across operational and manufacturing activity.

Range management

Link users, firearm issues, ammunition allocation, consumption and returns. Support a clear reconciliation between the firing point and the armoury.

Production and manufacturing

Track controlled components and finished assets through agreed production stages. Link work orders, external processes, proof-house movements and handover records.

Maintenance and external custody

Retain service, inspection and repair histories against each asset. Follow items sent to external workshops or third-party holders, preserving responsibility, location and return records.

Module availability, production workflows and jurisdiction-specific rules are agreed for each deployment.

Configured for your jurisdiction and licence

Support requirements across Great Britain, Northern Ireland and the Republic of Ireland through jurisdiction-specific configuration. Relevant frameworks include the Firearms Act 1968, the Firearms (Northern Ireland) Order 2004, the Irish Firearms Acts and applicable explosives legislation.
